#### WHO WE ARE

Agrisolve provides farmers access to improved inputs and market platform to sustain availability of food and enable livelihoods are improved. Using an integrated food system development approach to ensure productivity with farmers by giving access to inputs and technologies and provide market system methodology that continuously builds market framework that enables infrastructures, technologies and establish grounds for structures to generate equitable market access for the farmer and food security.

These objectives are executed with and for smallholder farmers with focus on change drivers; woman and young people.

#### WESOLVE PROJECTS

- Improving access to land and productive resources.
- Developing skills and knowledge on good agronomic, climate and environmentally sustainable production practices.
- Increasing women access to input
- Enhancing infrastructure to enhance access to market and trades.
- Improve the capacity of women to skill to lead entrepreneurs at the community level.

Yieldfix is an outgrower scheme and partnership program supporting smallholder farmers engaged in maize, soya, groundnut and rice farming with yield improvement services such as bundled input credit, extension, mechanization services and competitive market delivered at the community level.

#### **GREENSANDBOX**

The GreensandBox fosters the development of viable agricultural enterprises among the youth. By providing access to information, mentorship, incubation and finance. The project enhances the chances of success for young agripreneurs, contributing to the sustainability of their businesses.

Training programs are designed to improve the knowledge and skills of the farmers on new farming concepts, methods and application of farm inputs such as chemicals and fertilizers in the right way. Training and capacity building in good agronomic practices integrates climate change and environmental sustainability in agriculture production.

# LAST MILE POINTS

Greenconnect center is last mile access points using technology and community infrastructures to provide access to improved inputs, and equitable market platform to smallholders farmers.
